Art Unit: 2193

1. Claims 10-16 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

As per independent claim 10, the terms: (1) "frequency synthesizing <u>method</u>" (line 3) should be -- frequency synthesizing <u>step</u>--; (2) "back-end processing <u>method</u>" (line 6) should be -- back-end processing <u>step</u>--; and (3) "a mixing method and a filtering <u>method</u>" (lines 6-7) should be -- a mixing <u>sub-step</u> and a filtering <u>sub-step</u> --.

2. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claims 10-16 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter.

The claims recite a method for performing a mathematical function.

"[t]o satisfy section 101 requirements, the claim must be for a practical application of the Sec. 101 judicial exception, which can be identified in various ways:

- . The claimed invention "transforms" an article or physical object to a different state or thing.
- . The claimed invention otherwise produces a useful, concrete and tangible result,...".

See "Interim Guidelines for Examination of Patent Applications for Patent Subject Matter Eligibility" OG Date: 22 November 2005.

In order for claims to be statutory, claims must include a practical application with a concrete, useful, and tangible result. However, claims 10-16 merely disclose "method" [should be steps] of performing mathematical function without disclosing a practical application with a concrete, useful, and tangible result, as they are pre-emptive in any application. Therefore, claims 10-16 are directed to non-statutory subject matter.

Application/Control Number: 10/709,824 Page 3

Art Unit: 2193

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. Claims 1-3, 6 and 11-13 are rejected under 35 U.S.C. 103(a) as being unpatentable over either Hassun et al or Frank in view of applicant's Fig.1 (Prior Art).

As per independent claim 10, (1) Hassun et al disclose, e.g., see Fig. 4A, the invention substantially as claimed, including: a plurality of sine generators (20, 25, 30 and 35) and MUX (60) which are providing the claimed "frequency synthesizing method"; (2) Frank discloses, e.g., see Fig. 1, the invention substantially as claimed, including: a plurality of frequency generators (10, 20) and MUX (4) which are providing the claimed "frequency synthesizing method".). It is noted that neither Hassun et al nor Frank specifically detail the claimed "back-end processing method"; however, the feature is old and well known in the art. For example, see applicant's Fig.1. It would have been obvious to a person having ordinary skill in the art at the time the invention was made to combine applicant's "back-end processing method" in either Hassun et al or Frank, thereby making the claimed invention, because the proposed device is a frequency synthesizing method having selecting the desired frequency as claimed.

As per dependent claim 11, the claim adds "DAC" feature. Hassun et al and Frank show the feature.

Application/Control Number: 10/709,824

Art Unit: 2193

As per dependent claim 12, the claim adds "numerical controlled oscillator" feature. <u>Digital</u> "back-end processing method" should use the claimed feature.

As per dependent claim 13, the claim adds "voltage controlled oscillator" feature.

Hassun et al and Frank show the feature.

As per dependent claims 14-16, the claim adds "filter" features. applicant's Fig.1 shows the feature.

- 5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Cited reference is art of interest.
- 6. The following is an examiner's statement of reasons for allowance: the recorded references do NOT teach or suggest the novel "frequency synthesizing and back-end processing circuit" having: (1) "first multiplexer" for selecting the desired reference frequency and (2) "second multiplexer" for selecting the desired "analog" or "digital" process features as recited in independent claim 1.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Tan V. Mai whose telephone number is (571) 272-3726.

Application/Control Number: 10/709,824 Page 5

Art Unit: 2193

The examiner can normally be reached on Mon-Wed and Fri. from 9:30am to 2:30pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Meng-Ai An, can be reached on (571) 272-3756. The fax phone number for the organization where this application or proceeding is assigned is:

Official

(571) 273-8300.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (571) 272-2100.

Tan V. Mai Primary Examiner
